SUMMARY

Senior engineer with 10+ years across backend, full-stack, and cloud, moving steadily into the technical-leadership side: owning architecture, driving delivery to a quality bar, and mentoring engineers while staying close to the code. I lead projects end to end, from software design documents and change management through hands-on build, drive practices like test-driven development and CI/CD, and sit at the front line between product and engineering. Led a team of senior engineers and round-the-clock on-call. AWS Certified Solutions Architect – Professional; Domain-Driven Design certified.

EXPERIENCE

Senior Software Engineer · New10

Oct 2022 – Present

Amsterdam, Netherlands

- Led a service-deprecation project end to end, to the team's quality bar and with full documentation, working directly with the product owner.
- Owned architecture and change management for two new backend services, authoring their software design documents and shepherding the rollout.
- Replaced the external KVK (Dutch Chamber of Commerce) company-information API with an in-house ABN AMRO equivalent, **cutting company-data lookup costs by more than half (€100K a year)**.
- Owned security and vulnerability remediation: cleared all vulnerabilities across three services, then set up a recurring triage-and-fix schedule with Sentry alerting.
- Drove company-wide engineering improvements: **beta publishing in the internal-package CI/CD pipeline** and a **company-wide log-anonymization process**; built integration and end-to-end testing tooling across services.
- Conducted backend-engineer technical interviews; **hosted and presented the company-wide Service Engineering Meetings** (feature flags, AWS Summit learnings, local serverless debugging).

Stack: TypeScript Node.js AWS Serverless Terraform API design

Senior Software Engineer · Fashion Cloud

Jun 2021 – Oct 2022

Amsterdam, Netherlands

- Built and maintained an in-house data ETL tool that processed and merged high-volume product data in PostgreSQL, loading the merged result into MongoDB at the final stage.
- Rectified scalability bottlenecks by decoupling pipeline stages into independently deployed ECS containers.
- Orchestrated data pipelines with AWS Step Functions and CDK; researched visual ETL alternatives for data transformation.

Stack: TypeScript AWS ECS Step Functions CDK PostgreSQL MongoDB

DevOps Tech Lead · Deriv.com (formerly Binary.com)

Dec 2019 – Jun 2021

Cyberjaya, Malaysia

- Led a team of senior PostgreSQL engineers and ran round-the-clock on-call.
- Built a release manager on top of Chef and Slack **coordinating company-wide releases across hundreds of EC2 instances**.
- Migrated an on-prem BI stack (incl. a 2 TB reporting database) to GCP with minutes of downtime; cut GCP spend by thousands of USD/month.
- Automated tagging/release workflows by integrating Trello, GitHub, and Redmine; ran an in-house Git server synced between GitLab and GitHub.
- Implemented database security measures and set up tested point-in-time-recovery (PITR) backups.

Stack: PostgreSQL AWS GCP Docker Swarm Chef Airflow

- Worked across a distributed, message-driven trading backend: thin WebSocket API layers delegating to RPC workers over Redis queues, handling sub-second price ticks and trades.
- Designed and implemented `@deriv/deriv-api`, a reactive abstraction over the trading WebSocket API, plus its documentation, **used across all of the company's front-end apps**.
- Built the most successful front-end trading app on the WebSocket API (generating millions in annual revenue) and migrated the legacy site to a modern JS stack (Babel + React).
- Proposed and built `Deriv Bot`, a visual auto-trading platform (Google Blockly); maintained its `JavaScript-interpreter-sandbox npm package`.
- Wrote a Perl integration/load-testing framework (IO::Async, Future) and a streaming `WebSocket→S3 uploader` for KYC documents; briefly served as DBA (2019) with a 5× faster integration-test suite.

Stack: `Perl` `JavaScript` `React` `WebSocket` `Redis` `PostgreSQL`

- Built a `D3.js` dashboard visualizing RADIUS authentication logs streamed via DynamoDB Streams and AWS Lambda (Eleven Wireless).
- Developed AngularJS dashboards on Django/Flask REST APIs, documented with Swagger; shipped cross-platform mobile apps in Python (Kivy).
- Implemented an IETF draft for IPv6 headers in the FreeBSD kernel (C); real-time radar dashboard for SkyRadar.

- Linux administrator for the CSE department; managed course-management and AD servers, and built a UI to orchestrate virtual PCs with importable snapshots.
- Teaching assistant (Computer Architecture, Automata Theory, FPGA Lab, 8086 Assembler); researched automatic SELinux/MAC policy generation.

SELECTED PROJECTS

- `ai-tools` — CLI utilities for AI-assisted development, including `cerebro`, an orchestrator that runs and monitors multiple Claude agents until they produce a reviewed, merge-ready pull request.
- `codex-proxy` — Node.js proxy bridging the Claude Code CLI to OpenAI's Codex/Responses API, translating between the Anthropic and OpenAI request formats on the fly.

EDUCATION & CERTIFICATIONS

Education	Certifications
B.Sc. Computer Engineering , Shiraz University (2009–2014)	AWS Certified Solutions Architect – Professional (2025)
Cloud DevOps Engineer Nanodegree , Udacity (2020)	Domain-Driven Design (DDD), O'Reilly (2024)
	AWS Certified Solutions Architect – Associate (2024)
	AWS Certified Developer – Associate (2022)

SKILLS

Languages	TypeScript, JavaScript, Python, Perl, SQL, Bash
Backend	Node.js, REST & WebSocket APIs, API design, distributed / message-driven systems, PostgreSQL, MongoDB, Redis, DynamoDB, data pipelines / ETL, DDD
Cloud / Infra	AWS (Solutions Architect – Professional), CDK, Step Functions, Lambda, ECS/Fargate, Serverless, Terraform, Docker, Kubernetes, GCP
Leadership / Practice	Technical leadership, architecture & design docs, change management, mentoring & interviewing, knowledge sharing, TDD, CI/CD, security & vulnerability remediation, release engineering, on-call/SRE
Languages (human)	English (professional), Persian (native), Dutch (B2)
